

Food Tomorrow: Will There Be Any?

2014/04/18 Friday 13:34:33 MDT

Just how long can we live without Bees?

{flv}Honeybees 60 Minutes{/flv} Watch Part 2 of Why Are Honeybees Disappearing? - 4 Years only - according to Albert Einstein!

Wild Bees Reject Genetically Engineered Crop--Potential Major Impact on Pollination Wild bee abundance and seed production in conventional, organic, and genetically modified canola.

Comeback for the Bees: Amateur Apiaries

Beekeeping is booming. Britain's leading association for the insects is struggling to meet demand from would-be apiarists. Despite fears that British bees are at risk of falling into a catastrophic decline from which they may not recover, a growing number of celebrity beekeepers are helping to fuel interest...

Pesticides Indicted in Bee Deaths

Agriculture officials have renewed their scrutiny of the world's best-selling pest-killer as they try to solve the mysterious collapse of the nation's hives...

Honeybee Collapse Strikes Japan, Up to Fifty Percent of Honeybees Gone

For the first time, Japan has been hit with a large-scale collapse of honeybee populations like that experienced in other countries around the world....

Death Knell Sounds For Europe's Beekeepers

Europe's beekeeping industry could be wiped out in less than a decade as bees fall victim to disease, insecticides and intensive farming, international beekeeping body Apimondia said on Monday...
